ACTO ERP EAM:

Enterprise Asset
Management
Solution

dots.365
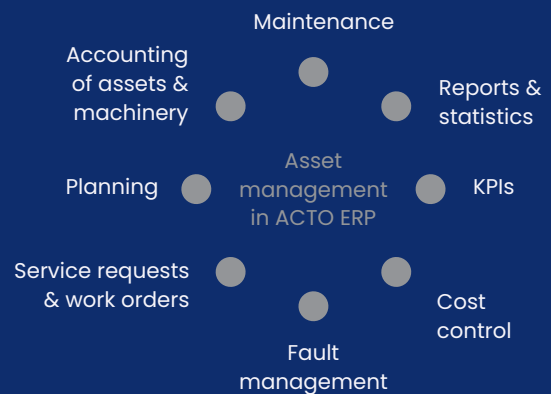

What is Enterprise Asset Management (EAM)?

Enterprise Asset Management (EAM) is a lifecycle solution for physical assets to maximize their lifespan, lower operating costs and TCO, improve effectiveness and quality of operation, boost the health of assets and ensure environmental protection. EAM is often confused with CMMS (Computerized Maintenance Management Solution) what covers just one narrow area of EAM functionality. EAM solution is usually implemented to better plan, optimize the execution and track asset service requests and involved staff. Inventory, skills, materials, spare parts and used machinery.

EAM empowers organizations to:

01 Optimize the approach of their assets and machinery management by basing processes and decisions on data about actual maintenance of assets and their faults.

02 Plan and monitor maintenance work orders.

03 Systematically store information into a unified system regarding performed maintenance, staff involved and resources used.

04 Prolong life of assets and machinery.

05 Be more cost-effective and efficient in their use of financial resources.

ACTO ERP EAM standard functionality

Asset management solution is a set of functions for effective and thorough accounting and maintenance of physical assets and machinery from their implementation up until the end of the life cycle.

Maintenance

Accounting of assets & machinery

Reports & statistics

Planning

Asset management in ACTO ERP

KPIs

Service requests & work orders

Cost control

Fault management

Expected results and customer benefits from implementing EAM

01 ACTO ERP EAM solution can consolidate a disparate network of assets, spare parts, hours worked and inventory used in one unified system to support correct material write-off and usage of spare parts. The flow of data and information is also enhanced, and the chance of errors decreased by eliminating the need to continually manually enter data in different systems.

02 ACTO ERP EAM can also ensure the availability of information to everyone involved in the process via mobile access to manage work orders and the execution, thus decreasing the time spent on identifying right assets, work orders and delegation or completion of tasks in the system.

03 Paper usage and circulation of printed documents can be lessened.

04 ACTO ERP EAM solution provides functionality to attribute and analyze work hours and materials used on each asset.

05 ACTO ERP EAM solution provides asset accounting by listing fixed assets or inventory contained within the asset from an accounting perspective.

06 ACTO ERP EAM solution collects and stores historical information about performed maintenance and changed parts throughout its history.

If you want to learn more about the solution, and get acquainted with a more detailed description of the functionality, write to **info@dots365.lv**, and we will send you ACTO ERP EAM whitepaper.
