

ACTO ERP PMA:

Project Management & Accounting
Solution

dots.365

What is ACTO ERP PMA?

ACTO ERP Project Management and Accounting solution (PMA) is an instrument for project management that enables full project cycle management - from identifying project ideas up to strategic planning, execution and control.

This solution helps companies achieve their Project goals by taking into account their main limitations: timeline, requirements, budget and business sphere of project.

PMA solution is made to systematically take inventory of all projects and project ideas for their management and centralized Project information management.

This solution supports all functions related to Project implementation - from the storage of information about all project activities to follow-up on the use of funding and storage of financial records.

PMA solution also enables the planning of Project budgets and their management from start to finish. Automatic cost allocation can be enabled for certain projects and solution helps with tracking of budget usage and fulfilment during the project.

ACTO ERP PMA functions and applicability

ACTO ERP PMA system is suitable for various industries including but not limited to consulting and professional services, advertising and media, construction, manufacturing and services, government and public sector.

Regardless of industry project implementation consumes resources and creates financial results in the form of income or assets.

While Project management solutions are often used for external projects their functionality is also attributable to internal cost projects.

PMA process can be split into 3 phases:

Interaction among ACTO ERP modules

PMA solution is closely connected with the rest of ACTO ERP system to maintain all data in a unified ERP system.

Customer benefits from PMA functionality in unified ERP system:

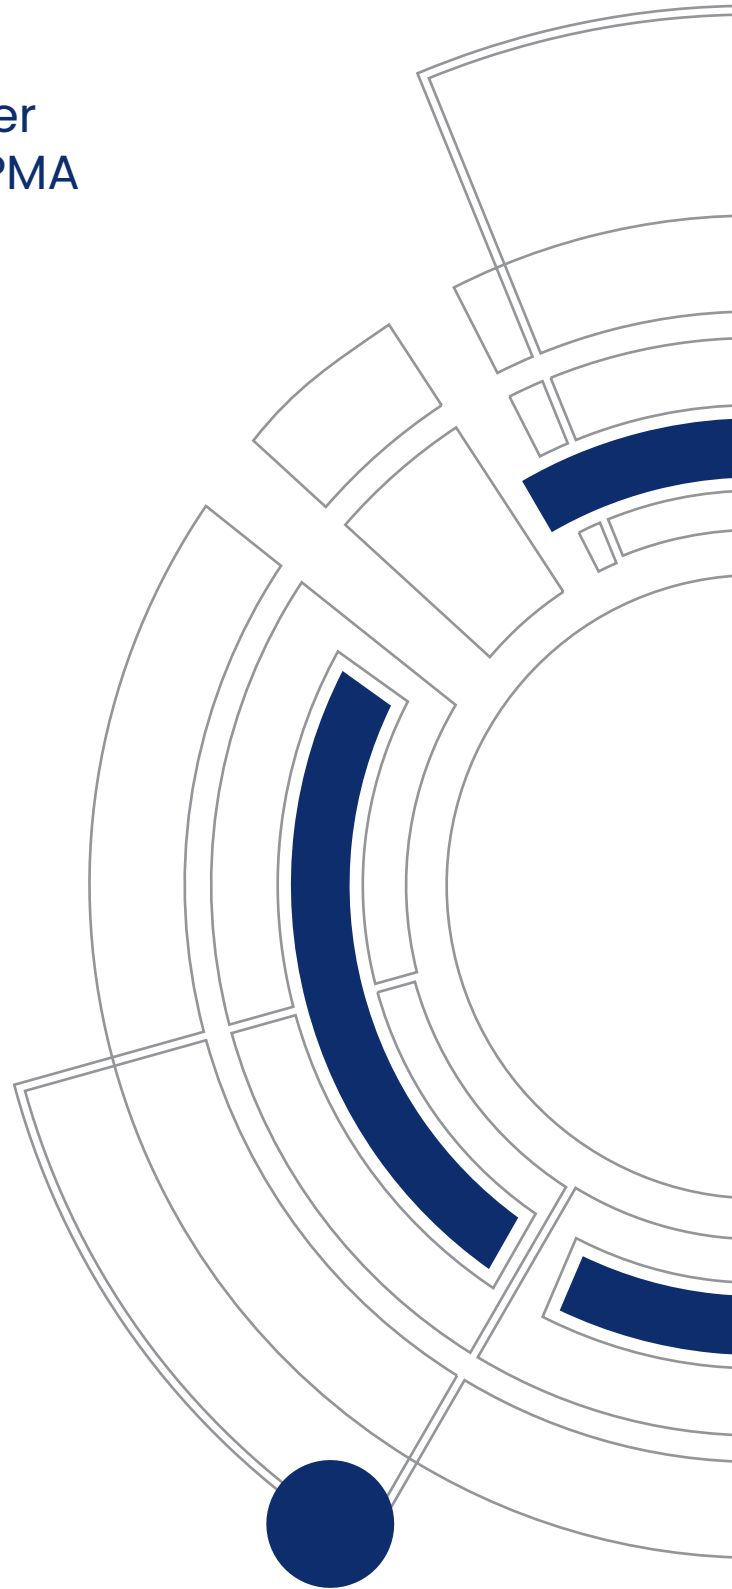

- 01 All information and data are stored in one place thus minimizing error risks with repeated data entry in different systems.
- 02 Time saving by eliminating need for data entry in multiple systems and data integrity validations between systems.
- 03 Constant flow of data and information without need for data imports and exports.

Expected results and customer benefits after implementing PMA

Solution offers convenient, fast and consistent project identification, selection and approval in Project portfolios to keep them relevant. So that projects can be included in company development plans.

Key solution benefits:

- 01 Users gain centralized Project management system that stores information about project progress and state from its inception to finalization.
- 02 Project management and financing process become transparent to avoid doubts about usefulness and justification of project implementation.
- 03 Improved and streamlined project accounting process and service quality.
- 04 Consistent project management process and clear overview of the effectiveness of the project portfolio.
- 05 Increased productivity by alleviating information management tasks during the project
- 06 More effective project accounting and management related processes.
- 07 All information regarding project accounting and management in one unified system.
